2017 REPORT OF THE NORFOLK COUNTY MOSQUITO CONTROL DISTRICT

NCMCD operations apply an Integrated Pest Management (IPM) approach to mosquito control that is rational, environmentally sensitive, and cost effective.

Surveillance

NCMCD is engaged in an intensive monitoring process through weekly field collections and data analysis in collaboration with the Massachusetts Department of Public Health (MDPH) to detect for disease-vectoring mosquitoes. Virus isolations assist us in focusing our surveillance to hot zones thereby allowing us to alert nearby towns of a potential epidemic. Public requests for service alert us to high numbers of nuisance mosquitoes.

| | |
|-------------------------------|--|
| Virus Isolations in the town: | 9 pools submitted, no isolations in 2017 |
| Requests for service: | 270 |

Water Management

Communication with residents and town/state/federal officials, site visits, monitoring, wildlife management, and land surveys while maintaining regulatory compliance is integral to the management of waterways that may contribute to mosquito breeding. Pre- to post-management documentation allows us to assess the efficacy of our work. Tire collections remove a common breeding site of mosquitoes.

| | |
|---------------------------------------|-------------|
| Culverts cleared | 22 culverts |
| Drainage ditches checked/hand cleaned | 9,300 feet |
| Intensive hand clean/brushing* | 6,970 feet |
| Mechanical water management | 118 feet |
| Tires collected | 8 |

* *Combination of brush cutting and clearing of severely degraded drainage systems or streams by hand.*

Larval Control

When mosquito larval habitat management is not possible, larval mosquito abatement is the most environmentally friendly and effective method of mosquito control. An intensive monitoring program, aides in our decision to effectively target culprits locations.

| | |
|--|--------------|
| Spring aerial larvicide applications (April) | 276.9 acres |
| Summer aerial larvicide applications (May – August) | 0 acres |
| Larval control - briquette & granular applications by hand | 5.9 acres |
| Rain basin treatments – briquettes by hand (West Nile virus control) | 1,249 basins |
| Abandoned/unopened pool or other manmade structures treated | 1 |

Adult Control

Adult mosquito control is necessary when public health and/or quality of life is threatened either by disease agents, overwhelming populations, or both. Our surveillance program, along with service request data and state of the art GPS and computer equipment, allows us to focus our treatments to targeted areas.

| | |
|---|-------------|
| Adult aerosol ultra low volume (ULV) applications from trucks | 4,333 acres |
| Barrier applications on municipal property | 0 |

Respectfully submitted,

David A. Lawson, Director
